

## Job Description

**Job Title:** Developer

**Reporting to:** Senior Developer

### About Us

UK Credit is one of the largest guarantor loan companies in the UK and part of the family owned Norfolk Capital group which has been around for 30 years. We have succeeded in growing without forgetting what's important – our customers, our staff and our values. Our customers are at the heart of everything we do. We recognise and reward our top talent, who have made the UK Credit success story possible. Our team thrive in an open plan environment, which is fun, friendly and supportive.

### About you

The development team is the key enabler to our future success as we strive to bring the benefits of a FinTech organisation. Many of the key strategic objectives require us to utilise technology to support both our customers and our staff. We're looking for talented C#.Net developers to join our highly skilled development team, working collaboratively to solve problems for our customers and staff. To be successful, you'll be technically skilled, enthusiastic and passionate about problem solving. The ability to interact with multiple stakeholders and understand the requirements of each project you work on is essential.

Your time will be split between working with others to develop new systems and improving and maintaining existing systems. We work in an open environment and we believe in finding the best ideas through a philosophy of "all voices are equal".

### Key requirements

- 2 years commercial experience
- The ability to get to grips with our existing systems to provide ongoing maintenance and helpdesk support
- You will be expected to learn quickly as a wide variety of technologies are used
- Excellent ability to work and communicate effectively with both colleagues and the business leadership team
- Ability to work across the full software development cycle
- You will be expected to write high quality C# applications matching each individual business/project specifications

## Primary Technical Skills

- Microsoft .NET technologies ( Web & Windows Services)
- C#.NET
- Asp.NET, Asp.Net MVC
